

Server Virtualization Assessment

Deliverables

Bell Industries will provide specific information on:

- Existing data center profile
- Areas with greatest potential ROI improvement
- Processor, memory and disk utilization
- Server maintenance savings opportunities
- Server administration savings opportunities
- Hard and soft costs analysis
- Server virtualization design and cost

Time On-site

Approximately 3-5 days, depending on size and complexity of the data center and geographical diversity.

Cost

Bell Industries may be able to help fund the assessment.

Description

With today's competitive business environment, IT is faced with more challenges than ever before. Strategically, IT is expected to quickly deliver an "edge" in a competitive marketplace. This can be a difficult proposition, as IT is tasked with managing more 'surface area' than ever before.

Bell Industries' Server Virtualization Assessment will provide the objective information you need to help you understand how you can shrink your physical server farm. Let our experts help you "buy back" your talented IT server management staff – allowing you to deploy them where they are most needed, and give your business the competitive edge it needs.

Our team will cover several topics during the assessment, including:

- Consolidation
- Physical to virtual machine migration
- Legacy application hosting
- Test and development virtualization
- Continuity requirements
- Server growth plan

In addition, Bell's team will:

- Provide consolidation design options
- Provide space, heat and power analysis
- Provide ROI justification

Bell's highly trained team of objective professionals will help your organization determine if virtualization is right for you. Contact your Bell Industries Account Manager today for more details.
